

1st International Environmental, Social and Governance (ESG) Forum 2023

Cultivation and Practices towards Sustainability

ESG

ENVIRONMENTAL, SOCIAL, AND GOVERNANCE

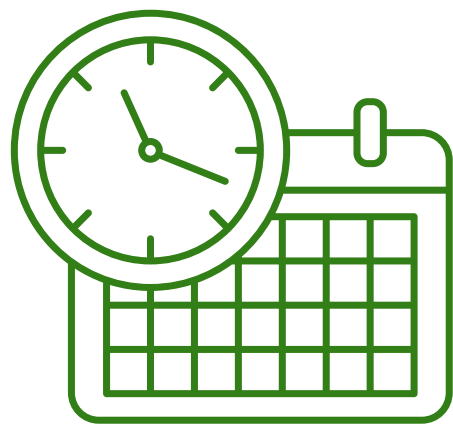

The importance of ESG (Environmental, Social, and Governance) trends manifested decades ago due to global warming, depletion of natural resources, increase in poverty, and endless corporate scandals, just to name a few.

Investors and corporations are aware of increasing regulations, demands for transparency, valuation, and assessment in recent years. They recognize that ESG Ratings are an important tool that will provide valuable investment information and create a positive societal impact on the community.

Universities could also play a vital role in creating ESG awareness and enhancing the experience of staff and student in the aspect of sustainability and social responsibility
